

Healthy water, healthy life.

EcoFast Filter

Inline Water Filter

A long-term solution for healthy drinking water on tap in your own home

Drinking water filters can be used in a variety of different ways – one of the most convenient is the inline, or under-counter, filter. Inline water filters are one of the most popular home drinking water filtration systems.

- Compact and discreet
- Highly efficient
- Space-saving
- Long lasting
- Readily available

An inline water filter is attached directly to the cold water pipe running underneath the sink. Water is filtered as it passes through the ceramic filter candle contained within the housing before reaching the drinking water tap.

By being fitted under the counter, inline filters are a highly efficient and discreet way to filter drinking water.

The quick change, auto shut-off, environmentally friendly drinking water filter for your home:

The Doulton® G1 has been specifically designed for speed and efficiency:

- Integrated mounting bracket incorporated into the head for ease of installation
- The quarter turn action of removing the filter body from the head automatically switches off the water supply
- Quick change, fast changeover of filter candle
- Installation instructions and online video guidance

Healthy water, healthy life.

EcoFast Filter

Multistage filtration in one filter candle

BioTect Ultra SP®

Stage 1
